

Organic Botanical Extraction Using Water

Introducing the Spinning Disc Reactor by Infinity Supercritical

Cannabis | Hemp CBD Producers | High Tech Industry

- Uses water as the solvent
- Cell lysis using microjet and centrifugal technology
- High flow continuous feed system up to 100 lbs (45 kg) per hour
 - Push-button automated operation
 - No air compressor needed
 - Does not use high pressure gas
 - 220 V 50/60 hz
 - Closed loop distilled water
- High tech applications include algae, nano particles, graphene, centrifugal partition chromatography, fast winterization, and liquid-solid separation.
